ALLIES diarization End User Agreement

For the ALLIES diarization evaluation, we provide under authorisation of ELDA a development corpus built from the ESTER, ETAPE and Repere corpora. It comprises of 675 audio files and the associated mtdm and uem files. The speaker names in the mdtm files have been normalized following the Repere conventions. The files have also been tagged by time for lifelong learning purposes, and split into training and development.

The participant agrees that the corpus is to be used only for non-commercial research purposes for the duration of the evaluation, and must be destroyed afterwards.
